

Final Project Grading Rubric (Total: 100 points)

1. Project Report (50 points)

1. Clear introduction of the dataset
2. Appropriate strategy for data storage and access using HDFS
3. Complete data preprocessing steps, including cleaning, parsing, and handling missing values
4. Well-designed analytical questions and correct use of methods (Spark, Hive, SQL, etc.)
5. Key findings explained with clarity and depth
6. Effective visualizations with meaningful interpretation
7. Conclusion and reflection with critical insight
8. Overall report coherence, clear explanation of team roles, and quality of Presentation

2. Source Code (50 points)

1. Complete and executable notebook or scripts (.ipynb or .py)
2. Proper design of the data loading and cleaning pipeline using Spark/HDFS
3. Correct and effective use of Spark/HDFS tools
4. Code quality and style, including structure and comments
5. SQL or HiveQL scripts, where applicable
6. Evidence of methodological innovation or depth in approach
7. Completeness of results and effectiveness of demonstration
8. Optional extended implementation (e.g., dashboard or web interface) may earn up to 10 extra points, counted under this section
